EXTERNAL FITTINGS – ARMS ................................................................................................................ 31
EXTERNAL FITTINGS – LINKAGE ........................................................................................................ 32
GENERAL INFORMATION AND SAFETY SUMMARY

As we will have no influence on the installation of complete windscreen wiper systems if installation is to be carried out by the customer, we are unable to accept liability for installation errors.

If you require any additional information or any special problems arise which the installation/maintenance instructions do not treat in sufficient detail please contact Customer Service at B. Hepworth and Co Ltd directly.

Safety Precautions

CAUTION! BEWARE OF INJURY!

BEFORE WORKING ON THE WIPER SYSTEM, OBSERVE THE FOLLOWING REMARKS WITHOUT FAIL!

Most wiper motors have a park setting, which permits them to default to the parked position if connected to the vehicle electrical system, even when the wiper is switched off. FOR THIS REASON, AT THIS POINT IN TIME, NEITHER MAY THE WIPER ARM BE MOUNTED, NOR MAY ANY PERSON HAVE HANDS, FINGERS, ETC ANYWHERE NEAR THE WIPER SYSTEM. Even small wiper motors can neither be braked nor stopped by hand.

NEVER REACH INTO THE AREA OF THE ROD LINKAGE WHEN THE SYSTEM IS RUNNING!

When putting into service (i.e. when connecting the wiper motor to the vehicle electrical system, even if the wiper switch is in the 0 position), never leave any loose items such as screwdrivers in the area of the wiper system, as flying objects could lead to injury.

Please ensure the equipment is handled with care. Do not drop or bang the equipment down on a hard surface taking extra care around the area where the motor shaft is situated. Do not hammer the motor shaft when installing the equipment, as this will cause the motor gear plate to deform causing premature failure of the unit.

Introduction

The Windscreen Wiper system utilised is detailed on the following pages. The primary components that form the Windscreen Wiper System are the wiper motor linkage, the wiper arm assemblies and the wiper blades.

Vari-Arc Lever Settings

IMPORTANT

Vari-arc levers which have been factory set will be torqued and paint marked. Do not adjust. Unpainted lever nuts must be torque tightened M8 = 20Nm, prior to the unit being fitted.

Where internal fixing screws and/or nuts are factory set and paint marked, leave untouched unless required to be changed or paint mark is damaged.

DESCRIPTION OF WIPER SYSTEM

The wiper motor and bracket is shown in Figures 1a, 1b & 2. The electric wiper motor forms the central part of the windshield wiper system. The motor is mounted on a fabricated mild steel bracket which is polyester powder coated to prevent corrosion. The motor is connected electrically by means of a multi-pin connector. Ref Figure 3

The drive lever is secured to the wiper motor shaft and connected through a tie bar, to the spindle lever assembly. These components transfer the motor shaft rotation to the wiper arm assemblies.

The drive mechanism provided transfers the rotary output from the motor; to a reciprocating motion of the spindles, this mechanism is zinc plated and is sized to give the correct angle of arc for the windscreen wiper arm being driven.

The Spindles that drive the wiper arms pass through the bulkhead, connecting the drive mechanism to the wiper arm; these are manufactured from stainless steel, to prevent corrosion. The spindles are driven from the main drive crank by connecting tie bars which distributes the load evenly between the arms of the wiper arm thus reduces the load on the individual interfaces between the wiper arm and the spindles.

Wiper Arm Assembly

The wiper arm is manufactured from stainless steel and is polyester powder coated to prevent corrosion and to be of good appearance.

The wiper arm is shown below. One wiper arm assembly is used on each unit. The wiper arm assembly mounts directly onto the spindles protruding through the bulkhead. The wiper arm is secured to the spindle via a series of nuts and washers.

The blade is secured to the arm assembly using the blade clip arrangement on the arm and blade bolt.

**IMPORTANT**
On arms with 2 x heavy duty heads the arc of wipe on the linkage MUST NOT exceed 70°
NOTE
Retain all items removed in a safe place, as they will be required on reassembly.

Any item to be discarded must be done in accordance to vessels manufacturer described task guidelines

If you experience any difficulty in the fitting of any of the units/components, please do not hesitate to contact Customer Service at B. Hepworth & Co. for advice.

Use the drawings for reference.

WARNING:
Isolate the electrical supply before commencing any fitting work on any part of the wiper system.
Drilling Diagram

NOTE – Drilling Diagram is NOT to size and is for reference only

Drill holes 'A' and 'B' at Ø30mm (Note Hole 'B' not required on Pendulum units)

Drill hole 'C' at Ø8.5mm (6 options shown)
NOTE – Drilling Diagram is NOT to size and is for reference only

Drill holes ‘A’ and ‘B’ at Ø30mm (Note Hole ‘B’ not required on Pendulum units)

Drill hole ‘C’ at Ø8.5mm (6 options shown)
FITTING THE WIPER UNIT

IMPORTANT
Vari-arc levers which have been factory set will be torqued and paint marked. Do not adjust. Unpainted lever nuts must be torque tightened M8 = 20Nm, prior to the unit being fitted.

Ref Figure – Drilling Diagram
When the spindle positions have been drilled in the bulkhead, the following procedures apply.

Ref Figure 2 – Exploded Diagram

On all units –
1. Remove from each spindle one weather cap (16), one M10 nut (15), one washer – flat (14)
2. Remove from each liner, one weather cap (13), one M26 nuts (12), one washer – single coil (11), one washer – flat (10), and one washer – neoprene (9)

On Pantograph units only –
3. Remove idler plate (8) and finally idler gasket (7)

NOTE the Motor Unit is MOUNTED from INSIDE the Bulkhead.

4. Fit motor unit and fix in place through predrilled mounting holes (Fixing bolts not supplied)
5. Externally – ENSURE a proprietary sealant (Not supplied) is used around all points of entry through bulkhead.

On Pantograph units only –
6. Fit following items – one idler gasket (7) and one idler plate (8) over both liners, next to bulkhead.

On all units –
7. Fit following items – Onto each liner, one washer – neoprene (9), one washer – flat (10), one washer – single coil (11), one M26 nuts (12)
   Torque M26 = 30Nm (on Brass Liner Nut)
   Torque M26 = 50Nm (on SS Liner – G.R.P. – Nut)
   Torque M26 = 80Nm (on SS Liner – Metal Structure – Nut)
8. Fit onto each liner, one M26 weather cap (13), ensuring that it sits tightly around spindle shaft.
9. Internally – Wire motor to vessels electrics via switch/controller (May or/may not be supplied)

With Reference to FittingInstructions - Electrical Connections
VARI ARC UNITS – ARC ADJUSTMENT

IMPORTANT
Vari-arc levers which have been factory set will be torqued and paint marked. Do not adjust. Unpainted lever nuts must be torque tightened M8 = 20Nm, prior to the unit being fitted.

1. **Internally** – Run Motor to insure it is parked correctly. Disconnect all Electrical Power.

2. Slacken bearing nuts at both ends of tie bar and securing Nylock nut (26) on Vari arc lever.

3. Slide bearing/tie bar assembly pivot pin (27) towards liner/spindle assembly to *increase* arc to 90° max or away from liner/spindle assembly to *decrease* arc to 40° min.

4. Ensure you note markings on lever when correct arc is reached. **Important: Pantograph Systems must not exceed 90° arc of wipe.**

5. Adjust arc until blade parks approximately 75-100mm from edge of screen when screen is dry. Test on a wet screen to prove clearance is acceptable.

6. Tighten bearing nuts at both ends of tie bar and securing Nylock nut (26)

7. Tighten securing Nylock nut (26) on Vari arc lever

   *Torque M8 = 20Nm (on Arm – V.A. lever)*

**IMPORTANT:**
Ensure BEARING CENTRES are as stated in drawing, Figure 1

FITTING THE WIPER BLADE

The wiper blades should be changed every 12 months but this is dependent on use and operating conditions

With reference to the Maintenance Table and the Troubleshooting Table – Continued

**Figure – Blade Clip Fixings**

1. Remove blade retaining screw (1), and M4 Nylock nut (2), from blade clip on arm.

**NOTE**

No plastic spacers required – if supplied with blade

If only one end of the wiper blade rubber is captive, it must be fitted so it will be at the top of the screen when the arm is in the vertical position.

(Articulated blades only)

**Ref Figure – Blade Captive End**

2. Place wiper blade directly into arm blade clip.

3. Ensure that all fixing holes align, on wiper blade and arm blade clip.

**Ref Figure – Blade Clip Fixings**

4. Secure in place with blade retaining screw (1), and M4 Nylock nut (2).

**IMPORTANT**

DO NOT over tighten blade retaining screw and nut, as blade is required to pivot on glass.

**Ref Figure – Nut Tightening**

5. Secure nut until tight – then 1/4 turn back

**NOTE**

Pictorial representation only, May not be exact to supplied arm
FITTING THE WIPER ARM ASSEMBLY

IMPORTANT:
The blade must be fitted to arm prior to arm being fitted. (This is to prevent blade clip damaging screen)

1. **Internally** – Run motor to insure it is parked correctly. Disconnect all electrical power.

2. **Externally** – While unit is being run, it is IMPORTANT to observe direction drive spindle rotates in immediately before it stops. This direction will give PARK POSITION.

**Pantograph Arms Only:**

**Ref Figure – Arm Alignment**

3. Fit arm onto spindle allowing blade to lay approx 50-75mm from edge of glass in PARKED POSITION. Test on a wet screen to prove clearance is acceptable.

**Ref Figure – Arm Fittings**

4. Fit one 10mm flat washer (14) on to spindle next to arm head, then one M10 Nylock nut (15), on to each spindle.

5. Only tighten nut sufficiently to allow arm and blade to travel across glass when motor is run to see if positioning is correct.

6. If incorrectly positioned – DO NOT ATTEMPT TO ROTATE OR TWIST ARM ON SPINDLE this will damage splined end of drive spindle, resulting in arm and blade slipping in operation.

**Ref Figure – Arm Extractor**

7. To correct alignment errors, – loosen nut and gently pull arm up spindle, realign and repeat stages above. 
   *Use arm extractor tool to help pull wiper arm up spindle, if required*

8. When correctly aligned, tighten M10 spindle nuts
   *Torque M10 = 38Nm (on Spindle Nut)*

9. Fit weather caps supplied with linkage (16)

10. Carefully push black wash hose attached to wiper arm onto bulkhead connector *(Not Supplied)*

**IMPORTANT**

On first fitting check spring pressure on blade in parked position it must NOT exceed recommended pressure
1-1.5kg

**Pendulum Arms Only:**

**Ref Figure – Arm Fittings**

3. Fit arm onto spindle allowing blade to lay approx 50-75mm from edge of glass in PARKED POSITION. Test on a wet screen to prove clearance is acceptable.
4. Fit one 10mm flat washer (14) on to spindle next to arm head, then one M10 Nylock nut (15), on to each spindle.

5. Only tighten nut sufficiently to allow arm and blade to travel across glass when motor is run to see if positioning is correct.

6. If incorrectly positioned – DO NOT ATTEMPT TO ROTATE OR TWIST ARM ON SPINDLE this will damage splined end of drive spindle, resulting in arm and blade slipping in operation.

7. To correct alignment errors, – loosen nut and gently pull arm up spindle, realign and repeat stages above. Use arm extractor tool to help pull wiper arm up spindle, if required

8. When correctly aligned, tighten M10 spindle nuts Torque M10 = 38Nm (on Spindle Nut)

9. Fit weather caps supplied with linkage (16)

10. Carefully push black wash hose attached to wiper arm onto bulkhead connector (Not Supplied)

**IMPORTANT**

On first fitting check spring pressure on blade in parked position it must NOT exceed recommended pressure 1-1.5kg
ADJUSTING THE WIPER BLADE ANGLE

Figure – Adjusting the Wiper Blade Angle

IMPORTANT
Adjusting the Wiper Blade Angle only applies to Pantograph Arms with a Swivel Plate

Ref Figure – Adjusting the Wiper Blade Angle

1. On back of adjustable swivel plate, slacken all M5 screw and nut assemblies to allow movement of blade clip on plate.

2. Rotate blade clip and blade to correct angle. Max 25° about centre.

3. Re-tighten all M5 screw and nut assemblies

Torque M5 = 4.5Nm (on Arm – Swivel Plate/Blade Clip)
TROUBLESHOOTING – TABLE

Introduction

The following provides all the instructions and information necessary to locate problems and conduct tests on the windscreen wiper system components. The trouble-shooting table is provided for logical isolation of faults.

Safety Precautions

Always disconnect the power when servicing the Windscreen Wiper System, or on any ancillary components. Serious damage to the Equipment and/or Personal Injury may occur if the power is not disconnected.

Troubleshooting Procedures

Typical windshield wiper system troubleshooting procedures are contained in the Table. These troubleshooting and repair procedures should be followed when encountering operational problems with the windshield wiper system.

MAINTENANCE – TABLE

Introduction

The following contains all preventative maintenance details for the windscreen wiper components. Preventative maintenance procedures include the information required for when to replace the wiper blades. Refer to the Maintenance Instructions Section for removal and replacement for procedures.

Safety Precautions

Always disconnect the power when servicing the Windscreen Wiper System, or on any ancillary components. Serious damage to the Equipment and/or Personal Injury may occur if the power is not disconnected.

Scheduled Maintenance Action Check

WARNING: Isolate the electrical supply before commencing any fitting work on any part of the wiper system.

The Maintenance Table is a Scheduled Maintenance Action Index. The index provides a list of all performance tests if applicable and preventative maintenance procedures. The table has three columns: Periodicity, Equipment and Task.

The Periodicity column indicates the intervals between the maintenance tests and preventative maintenance procedures.

The equipment column lists the equipment, assembly or subassembly that corresponds to the maintenance action.

The task column lists the maintenance task to be performed.

<tr>
<td></td>
<td></td>
<td>Carry out a visual check for wear in rod end. (Pull on the tie-bar/double bearing to see if any movement in the rod end bearing at the inner ball on the outer casing.)</td>
</tr>
</tbody>
</table>

How to check for wear on the Rod End
**Ref Figure – Rod End Bearing**

1. Pull on tie-bar or double bearing to see if any movement in rod end bearing at inner ball on outer casing. **In accordance with Maintenance Table – continued. Carry out a visual check for wear in rod end.**

2. If excessive movement – replace
MAINTENANCE INSTRUCTIONS

NOTE
Retain all items removed in a safe place, as they will be required on reassembly.

Any item to be discarded must be done in accordance to vessels described task guidelines

If you experience any difficulty in the removal/replacement of any of the units/components, please do not hesitate to contact Customer Service at B. Hepworth & Co. for advice.

Use the drawings for reference.

WARNING:
Isolate the electrical supply before commencing any fitting work on any part of the wiper system.
TO REPLACE THE WIPER BLADE

The wiper blades should be changed every 12 months but this is dependent on use and operating conditions

*With reference to the Maintenance Table and the Troubleshooting Table – Continued*

**Removal**

1. **Internally** – Run motor to ensure it is parked correctly. Disconnect all electrical power.

2. **Externally** – Carefully pull wiper arm assy away from windscreen to enable access to wiper blade.

*Ref Figure – Blade Fittings*

3. Remove one blade retaining screw (3), and one M4 Nylock nut (4), from blade clip on arm.

4. Remove wiper blade from blade clip on wiper arm.

**Reassembly**

**NOTE**

No plastic spacers required – if supplied with blade.

If only one end of the wiper blade rubber is captive, it must be fitted so it will be at the top of the screen when the arm is in the vertical position.

1. Place wiper blade into blade clip on wiper arm.

*Ref Figure – Blade Captive End*

2. Ensure that all fixing holes align.

3. Secure in place with blade retaining screw (3), and nut (4)

**IMPORTANT**

Do not over tighten blade screw and nut, as wiper blade is required to pivot on glass.

*Ref Figure – Nut Tightening*

4. Secure nut until tight – then 1/4 turn back.

**NOTE**

*Pictorial representation only, May not be exact to supplied arm*

5. Lower wiper blade carefully back onto windscreen.
TO REPLACE THE WIPER ARM

Removal

*With Reference to Wiper Arm Assembly – Pantograph or Pendulum*

1. **Internally** – Run motor to ensure it is parked correctly. Disconnect all electrical power.

2. **Externally** – While Unit is being run it is IMPORTANT to observe direction drive spindle rotates in, immediately before it stops. This direction will give PARK POSITION.

3. Remove 10mm Nut Cap(s) – (16), M10 Nylock Nut(s) – (15) and 10mm Flat Washer(s) – (14). Then using Arm Extraction Tool carefully remove Arm *(Arm Extractor Tool is available see Fitting the Wiper Arm Assembly for instructions)*

Replacement

**IMPORTANT:**
The Blade must be fitted to the Arm prior to the Arm being fitted. (This is to prevent the Blade Clip damaging the screen.)

1. Fit wiper arm
   *In accordance with Fitting the Wiper Arm Assembly*
TO REMOVE THE ENTIRE WIPER MOTOR UNIT ASSEMBLY

**Removal**

*With Reference to Figure 2 – Exploded Diagram*

1. **Internally** – Run motor to insure it is parked correctly. Disconnect all electrical power. Disconnect wiring from Motor.

   **IMPORTANT:**
   Please make a note of PARKED position of ARMS and BLADES, before removal

2. **Externally** – remove arm caps, nuts and washers. Then using arm extraction tool carefully remove arms

3. Remove 26mm weather caps (13), M26 nuts (12), 26mm single coil washers (11), 26mm flat steel washers (10) 26mm neoprene washers (9), idler plate (8) and finally idler plate gasket (7).

4. **Internally** – Unscrew fixing bolts from motor mounting bracket (1).

5. Carefully remove entire wiper motor unit from bulkhead.

**Replacement**

1. Replace entire wiper motor assy.
   *In accordance with Fitting the Wiper Motor Assy*

2. Fit wiper arm assy.
   *In accordance with Fitting the Wiper Arm Assembly*
TO REPLACE THE DRIVE CRANK ASSEMBLY

Removal

Ref Figure – Wiper Motor

1. **Internally** – Run motor to insure it is parked correctly. Disconnect all electrical power.

2. Remove entire wiper motor assy. 
   *In accordance with To Remove the Entire Wiper Motor Unit Assembly*

**IMPORTANT:**
Please make a note of Drive Crank POSITION relative to SPINDLE LEVER, as this will affect PARK position for ARMS and BLADES, i.e. SPINDLE LEVER facing towards Motor or away from Motor

Make a note of Vari Arc Pin/Double Bearing position on Vari Arc Lever.

3. Slacken both bearing nuts at either end of tie bar.

4. Slacken drive crank nut (20), and bolt (19), carefully remove drive crank/bearing assy (4), from motor drive shaft.

5. Unscrew tie bar (5) from drive crank bearing (left hand thread) (22)

Replacement

1. Screw tie bar onto bearing (left hand thread) (22) of new drive crank/bearing assy (4).

2. Carefully fit drive crank/bearing assy (4), over motor drive shaft, *(referring to note after operation 2 on ‘to remove’ for position.)* Tighten drive crank nut (20), and bolt (19).

3. Tighten both bearing nuts at either end of tie bar.

**IMPORTANT:** Ensure bearing centres are as stated in drawing (figure 1)

4. Replace entire wiper motor assy. 
   *In accordance with Fitting the Wiper Motor Assy*

5. Fit wiper arm assy. 
   *In accordance with Fitting the Wiper Arm Assy*
TO REPLACE THE WIPER MOTOR

Removal

Ref Figure – Wiper Motor

1. **Internally** – Run motor to insure it is parked correctly. Disconnect all electrical power. Disconnect wiring from Motor.

2. Remove entire wiper motor assy.
   *In accordance with To Remove the Entire Wiper Motor Unit Assembly*

**IMPORTANT:**
Please make a note of Drive Crank POSITION relative to SPINDLE LEVER, as this will affect PARK position for ARMS and BLADES, i.e. SPINDLE LEVER facing towards Motor or away from Motor

3. Slacken both bearing nuts at either end of tie bar.

4. Slacken drive crank nut (20), and bolt (19), carefully remove drive crank/bearing assy (4), from motor drive shaft.

5. Unscrew three fixing bolts (18) and remove with washers (17) remove Wiper Motor (6)

Replacement

1. Replace new Wiper Motor (6) replace and tighten three fixing bolts (18) and washers (17)

2. Carefully fit drive crank/bearing assy (4), over motor drive shaft, (referring to note after operation 2 on ‘to remove’ for position.) Tighten drive crank nut (20), and bolt (19).

3. Tighten both bearing nuts at either end of tie bar.

**IMPORTANT:**
Ensure bearing centres are as stated in drawing (figure 1)

4. Replace entire wiper motor assy.
   *In accordance with Fitting the Wiper Motor Assy*

5. Fit wiper arm assy.
   *In accordance with Fitting the Wiper Arm Assy*
TO REPLACE THE TIE BAR

**Removal**

*Ref Figure – Wiper Motor*

1. **Internally** – Run motor to insure it is parked correctly. Disconnect all electrical power. Disconnect wiring from Motor.

2. Remove entire wiper motor assy.
   *In accordance with To Remove the Entire Wiper Motor Unit Assembly*

**IMPORTANT:**
Please make a note of Drive Crank POSITION relative to SPINDLE LEVER, as this will affect PARK position for ARMS and BLADES, i.e. SPINDLE LEVER facing towards Motor or away from Motor

3. Slacken both bearing nuts at either end of tie bar.

4. Slacken drive crank nut (20), and bolt (19), carefully remove drive crank/bearing assy (4), from motor drive shaft.

5. Unscrew tie bar – (5) from drive crank bearing (left hand thread) (22)

6. Repeat operation 5 on liner/lever/bearing assy (right hand thread) and remove tie bar (5).

**Replacement**

1. Screw new tie bar (note groove is on right hand end of tie bar) onto bearing (right hand thread) at liner/lever/bearing assy.

2. Screw new tie bar on to bearing (left hand thread) (22) of drive crank/bearing assy.

3. Carefully fit drive crank/bearing assy (4), over motor drive shaft, (referring to note after operation 2 on ‘to remove’ for position.) Tighten drive crank nut (20), and bolt (19).

4. Tighten both bearing nuts at either end of tie bar.

**IMPORTANT:**
Ensure bearing centres are as stated in drawing (figure 1)

5. Replace entire wiper motor assy.
   *In accordance with Fitting the Wiper Motor Assy*

6. Fit wiper arm assy.
   *In accordance with Fitting the Wiper Arm Assy*
TO REPLACE THE LEVER/LINER/SPINDLE SUB ASSEMBLY

*Removal*

1. *Internally* – Run motor to insure it is parked correctly. Disconnect all electrical power. Disconnect wiring from Motor.
2. Remove entire wiper motor assy.  
   *In accordance with To Remove the Entire Wiper Motor Unit Assembly*

**IMPORTANT:**
Please make a note of Drive Crank POSITION relative to SPINDLE LEVER, as this will affect PARK position for ARMS and BLADES, i.e. SPINDLE LEVER facing towards Motor or away from Motor

3. Slacken both bearing nuts at either end of tie bar.

**IMPORTANT:**
Make a note of the protrusion length of the Liner and/or Spindle from the front of the Bracket (1).

4. Unscrew tie bar from right hand bearing of liner/lever/bearing assy.
5. Unscrew remove entire liner/lever/bearing assy from bracket.

*Replacement*

1. Screw entire *new* liner/lever/bearing assy into bracket.
2. Screw tie bar onto right hand bearing at main liner/lever/bearing assy.
3. Tighten both bearing nuts at either end of tie bar.

**IMPORTANT:**
Ensure bearing centres are as stated in drawing (figure 1)

4. Replace entire wiper motor assy.  
   *In accordance with Fitting the Wiper Motor Assy*
5. Fit wiper arm assy.  
   *In accordance with Fitting the Wiper Arm Assy*
